

Technical Representation

CAMX

KNOW-HOW AT THE RIGHT PLACE

Our technical representatives have years of experience within operators and MRO's. Hence, we know what it takes to make a base maintenance visit successful. This means, on time, high quality and within budget. Our professionals are there to guide you through this complex task.

Together with our partners we introduce innovations like artificial intelligence for structural inspections and powerplant inspections.

- Complete team with experts on different subjects
- Same standard for all projects
- Guaranteed action follow-up using our own project / asset management system Cam+
- Innovations supporting the highest quality

BASE AND PAINT MAINTENANCE REPRESENTATION

Your aircraft is your money maker when it operates or needs to be marketed. So no matter if you are an operator or owner, it is the asset that should make the money by optimal performing. Base maintenance, or heavy maintenance, is a costly exercise that needs to be done right. You don't want to be faced with more work later on when it is done incorrectly the first time.

Since it is so complex, large and important, you need somebody that has the knowledge, drive and oversight to make a project like this successful. CamX technical representatives have the experience to make this happen. They have their years of experience from operators and MRO's and have been involved in many base maintenance checks, large modifications and project management.

They know what needs to be done to get the aircraft in optimal shape, on time and within your budget.

THE SUPPORT YOU NEED

Our technical representatives will coordinate the planning with the MRO as per the work scope agreed. They not only know the requirements, but also the type of aircraft and the things they need to pay attention to.

By being on site, with the aircraft, they will conduct their own inspections constantly. When areas are opened up they will have a close look at the surrounding area and document that so that you know what the quality is and where future issues might arise.

Thinking of solutions, we always try to find the most economical and optimal option for finding the correct parts and components, taking into account time and costs. When a repair is needed, our representatives have the knowledge to think along with the MRO or propose repair options that are the most convenient, cost effective and according to the standards required for future lease or aircraft sales.

A crucial item is documentation. Whatever is done during the base maintenance visit, it needs to be correctly documented. The completed task cards are audited, repair documents and certification is filed.

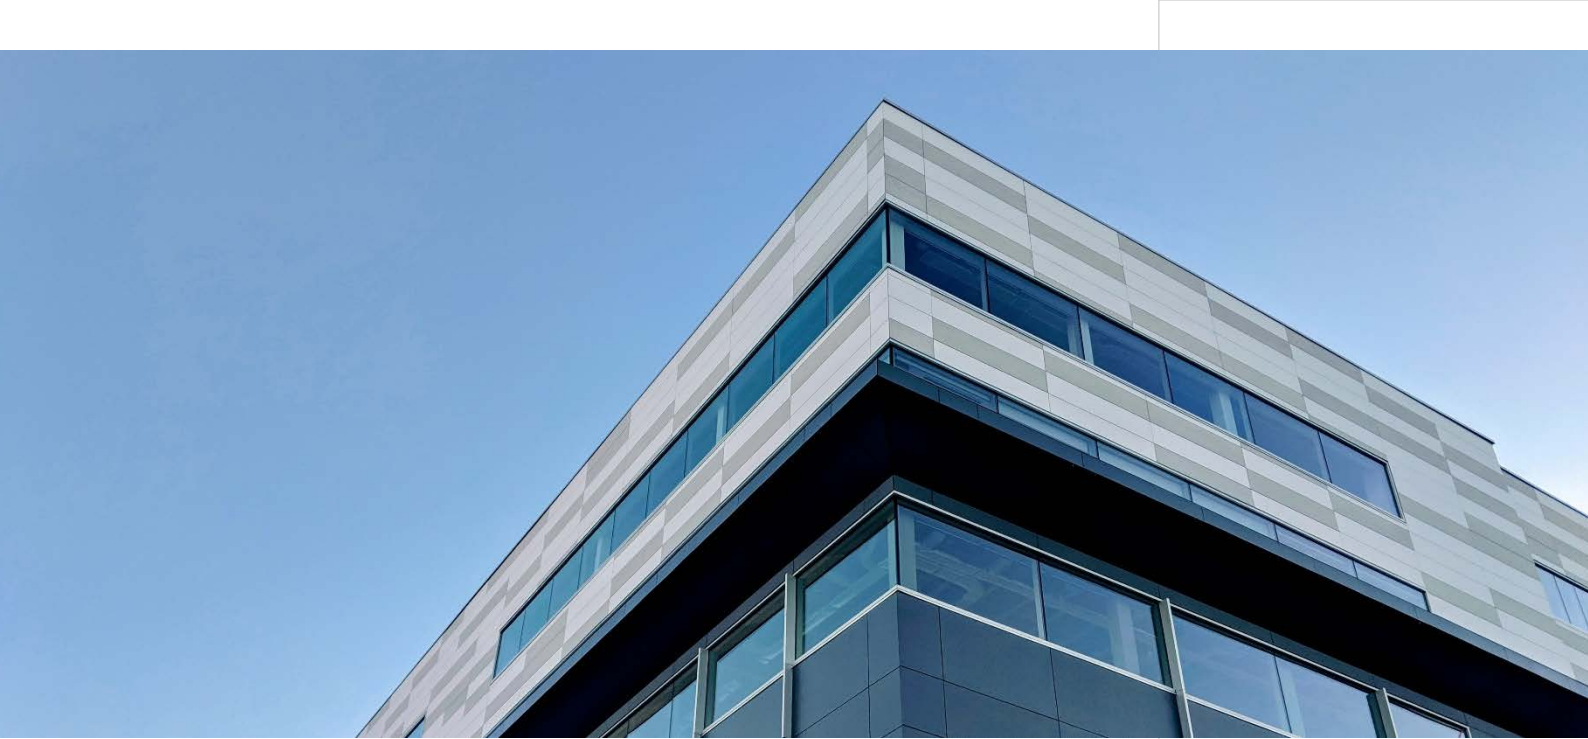

A TEAM OF EXPERTS

Freelance consultants gives maximum flexibility where and when you need manpower to do inspections, transfers of aircraft or support operations. However, we also noticed the lack of a standard and the different output every single time. Working for airlines and with aircraft owners and lessors, we experienced the challenge of not having one standard of documents, planning and forecasting the life cycle of airplanes.

The added value of CamX is that we are providing our services with the same standard for each project. No matter the aircraft build or type or the CamX team member working on your asset, you always receive the same format and quality compared to using different independent consultants on your projects.

So imagine flexibility in manpower, but one standard for all your aircraft and operations.

ABOUT CAMX AERO

Continuing Airworthiness, Asset Management and Maintenance, that's what CamX stands for. We are CamX and we support you, as owner, lessor or operator with your most valuable asset, the aircraft. But, we are not just an aircraft technical consultancy provider. CamX is specialized in Asset Management tasks like aircraft and records inspections, Technical Management tasks like base maintenance support and Engineering Support for CAMO organizations.

With the knowledge and dedication of the CamX team we can support you with any need you have in your daily business. As a customer you will always experience the feeling that CamX is part of your own organization.

There is a reason why we all say "passion led us here".
